Navigating Clusters of Environmental Ideologies

Spreading and Deepening Understanding of the Discursive Construction of Nature

The Environmental Ideologies Map serves as a bridge between academic research, public engagement and political activism for just ecological transition. Whether you are an educator seeking captivating resources for your classroom, a researcher striving to unravel the complexities of environmental discourses or an activist looking for tools to decode public discourses, this platform offers a wealth of knowledge that fosters rich understanding and dialogue in the current environmental crisis.

Charting Global and Local Dialogues

Gain a profound grasp of how different ideologies intertwine in the global conversation about nature and sustainability. Specifically tailored to resonate with the Swedish context, but easily extendable as groundwork for other contexts, the Environmental Ideologies Map empowers you to decipher the underlying current ideologies shaping societal and political debates over the environment.

You can use the Environmental Ideologies Map

To better understand and navigate how nature is ideologically articulated in the current societal debates, each element of the map is explained with textual and audio-visual content, produced by scholars from the fields of environmental humanities and communication, media studies, philosophy and anthropology.
